

China 2026

PROJECT LIGHTNING TALK:

Atlantis:

Terraform Pull Request Automation for Cloud Native Teams

Rui Chen · Atlantis Maintainer

Shanghai, China · September 8, 2026

The pull request becomes the workflow.

Pull request

Code + plan review

Webhook · apply request

Plan + apply results

Atlantis

PR orchestration

Configured requirements

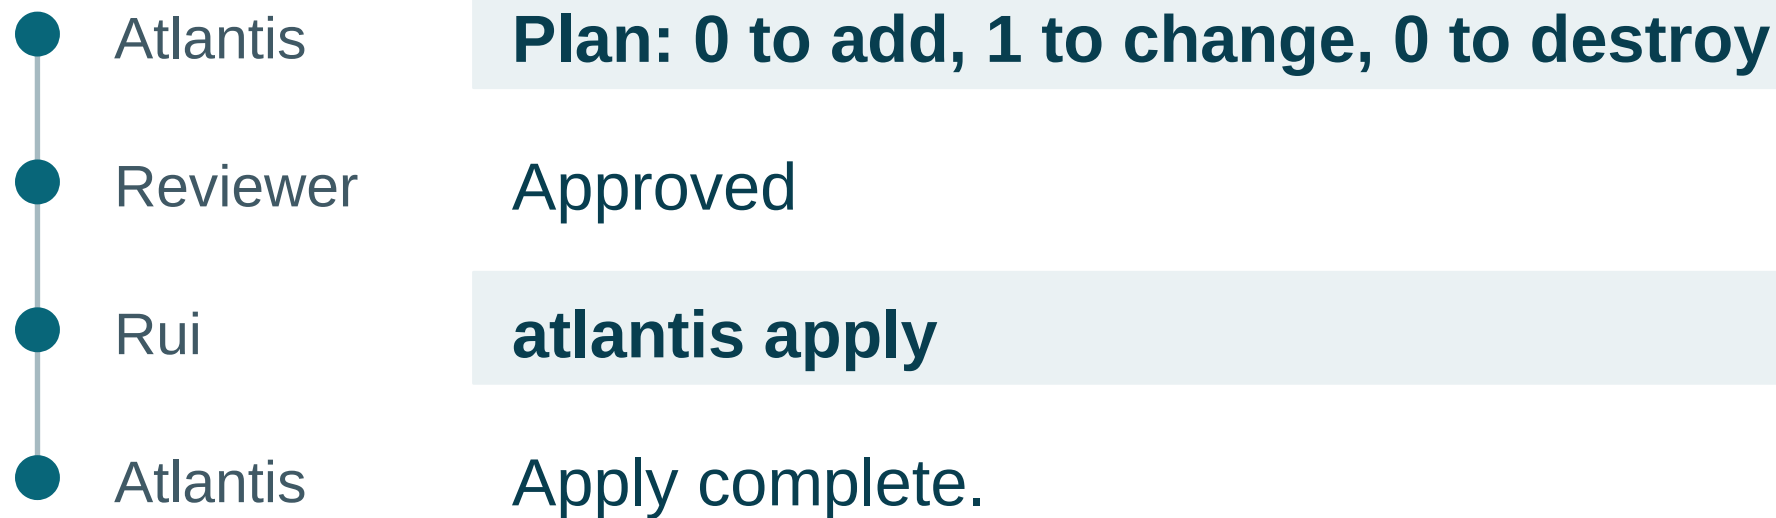

Terraform / OpenTofu

Providers · state · infrastructure

Results stay with
the pull request.

One change. One PR conversation.

infra: resize production database

Illustrative PR · approval requirement configured · apply before merge

Shared review. Controlled execution.

● **Collaborative**

Developers propose

● **Controlled**

Platform rules govern execution

● **Visible**

Plan + result beside the code

Connect Git to your infrastructure tools.

Git providers

GitHub · GitLab

Atlantis

PR orchestration

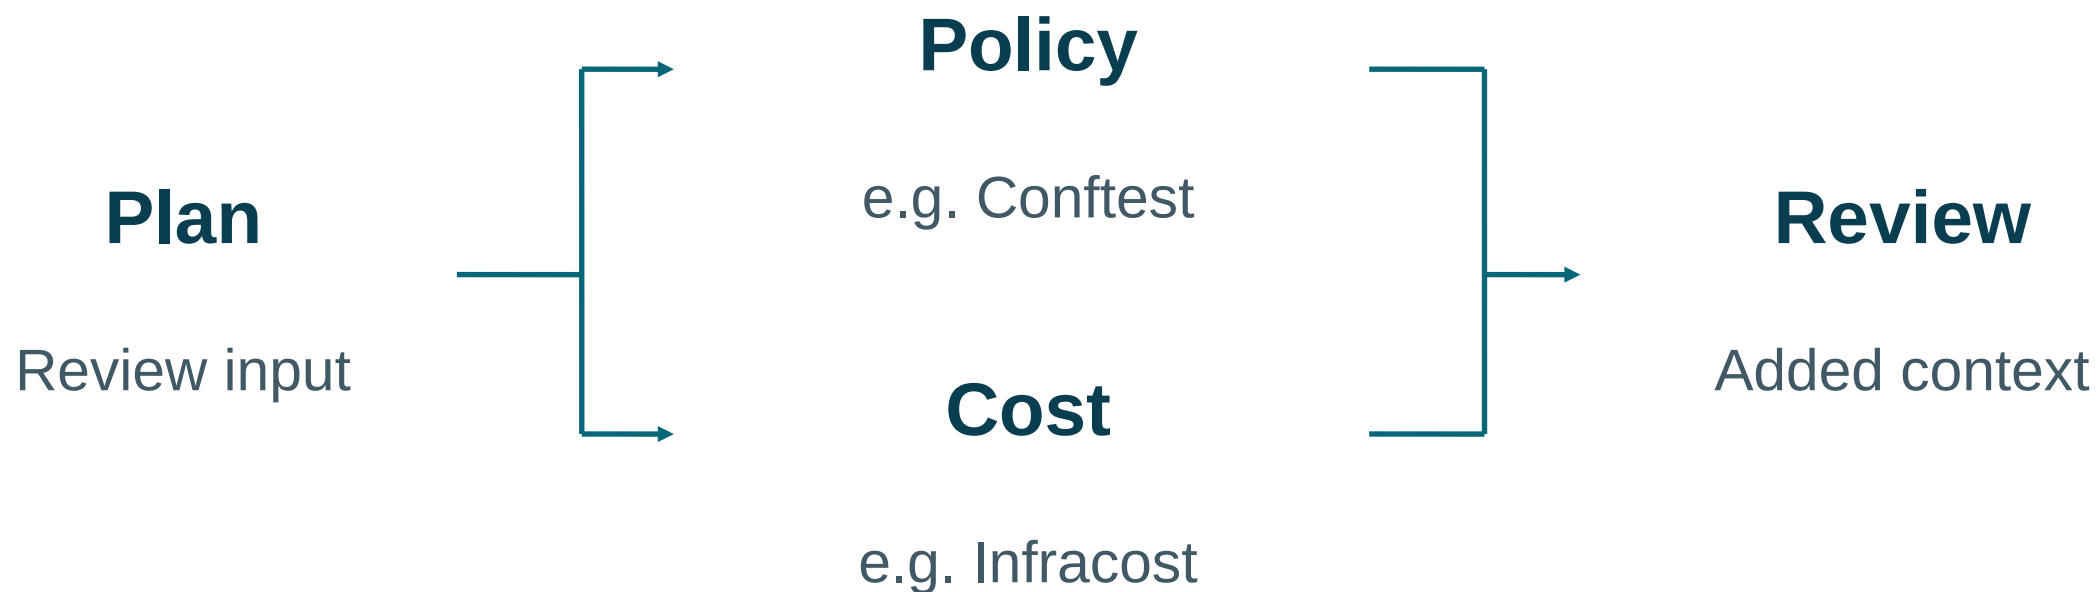

IaC execution

Terraform / OpenTofu

Purpose-built infrastructure PR automation

Extend the pull-request review.

Custom workflows compose your own tooling.

Atlantis is self-hosted. Kubernetes is optional.

Multiple stacks. One PR workflow.

Toward Atlantis 1.0.0

A clearer compatibility contract

Breaking changes —————> **Major version**

Planning discussion · not released

[Draft proposal #5296](#) · [release tracking #2496](#)

Infrastructure is code.

Plan it.

Review it.

Apply it.

From the pull request.
